

Freesia

Offset Blankets

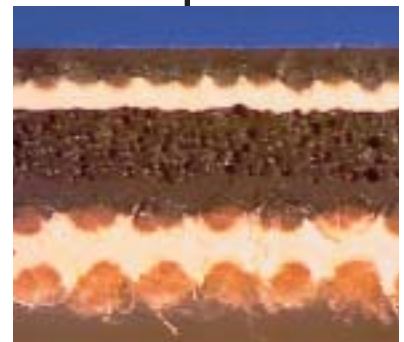

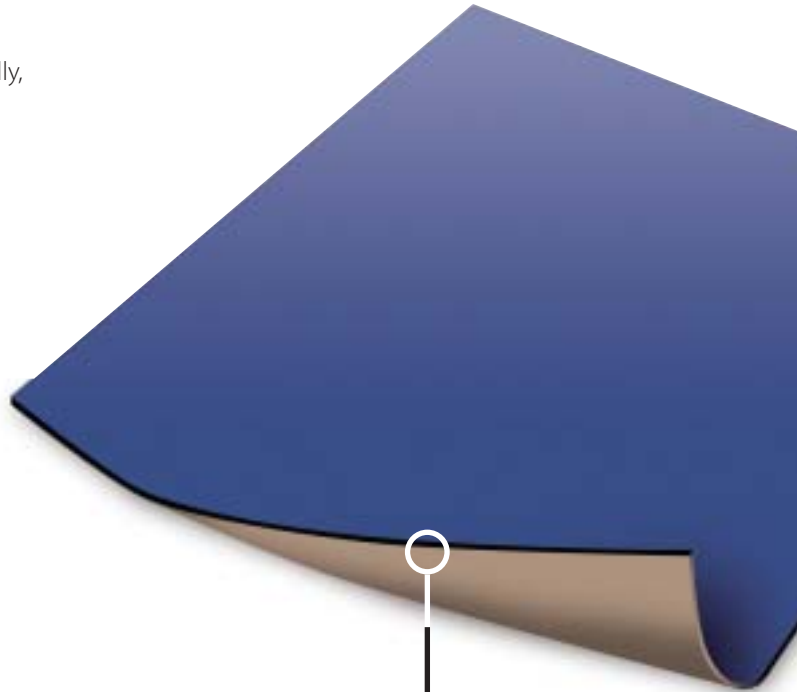

New Surface Formulation For Extended Durability And Resistance To Edge Cutting

MacDermid Freesia blankets utilize a highly researched blend of surface rubbers to produce a blanket with superior resistance to solvents and abrasion. Additionally, the blankets buffed surface reproduces both solids and halftones excellently.

Freesia blankets are built using a newly designed surface rubber to provide greater resistance to swelling, embossing and edge cutting from using multiple stocks.

Freesia blankets feature a micro-ground surface that enables the printer to achieve fine screen details and dense, consistent solids while also providing for superior release and washup. Carton printing can present unique challenges, but MacDermid **Freesia** blankets provide reproduction of quality images no matter what the stock.

For the number one carton printing blanket, count on the company that says "Yes We Can". MacDermid.

Key Features

- New surface rubber formulation resists solvents, abrasion and edge cutting
- Excellent control of fine screens and dense solids, even on board stocks
- Use with a variety of stocks
- Smoothly buffed surface rubber for superior release and washup
